

DATA-260 Homework 4 Report

Student Information

- Student: Shruti Shetty
- SID4: 9004
- Domain: Open-Source Package Vulnerabilities
- Branch: hw4
- Database: s9004_rel
- Seed: 9004
- Verify seed: 269004

1. Project Overview

This project extends the HW3 vulnerability-report application.

The HW4 system includes:

- A React frontend
- FastAPI backend routes
- MySQL persistence
- HTTP-only cookie authentication
- Server-side sessions
- Create, read, update, and delete operations
- N+1 query benchmarking
- RAG document retrieval and evaluation

2. React Frontend

The React client provides login, report listing, report creation, report updating, and report deletion.

Main React components:

- `Login.jsx`
- `Home.jsx`
- `CreateRecord.jsx`
- `UpdateRecord.jsx`
- `DeleteRecord.jsx`

The frontend uses Axios to communicate with FastAPI and React Router for navigation.

Important routes:

- /
- /create
- /update
- /delete

The frontend was tested by logging in, creating a report, viewing it, updating it, deleting it, and logging out.

Example API call:

```
```javascript await api.post("/api/reports", payload) ## 10. Evidence Screenshots
```

## React Dashboard

The React dashboard displays the logged-in user and seeded vulnerability records with Update and Delete actions.

React dashboard

## HW4 Verification

The verification output confirms the database, N+1 benchmark, RAG, and frontend checks.

```
~/data260-9004 -- zsh ~/data260-9004 -- zsh ~/data260-9004/nrmcmd -- zsh ...260-9004 -- curl http://localhost:8004/health +
